

# IX PREFERENCES

## COMPANY IX PREFERENCES

The Company Ix Preferences page displays the company's default preference for Ix data upload for product information. The Company Ix Preferences are used:

- At the time of Ix data post to decide whether or not to update existing Ximple catalog data which is searched by using Vendor Item + UCC Number.
- As a template to set up the Ix Preferences for vendors when they are added to the system (changing the Company Ix Preferences will have no effect on the existing Ix preferences setup for a vendor).

At the time of Ix post, a vendor's specific Ix Preferences will take precedence over the company's default. However, if a vendor does not have specific Ix preferences setup, the company's Ix Preferences will be used.

To Access: **Administration** module: Ix Process submenu - select the **Ix Preferences** option.

The Company Ix Preferences page displays the Ix preferences selected for the company. Any time changes are made to the page the data must be saved (click the **Save** button).
